

## QUALITY AND ENVIRONMENTAL POLICY STATEMENT

TCS Biosciences Ltd manufactures, develops and supplies diagnostic reagents for use in microbiology by commercial, pharmaceutical, research and medical organisations.

The Company manufactures high quality animal blood, serum products and freeze dried bacterial cultures as well as microbiological dyes and stains. It also works within the global market procuring and supplying externally manufactured products in order to offer customers a complete range of quality diagnostic and cell culture products.

The Company's Research & Development team works in the development of new products and technologies to expand and complement our current product range.

TCS Biosciences Ltd is situated in the conservation area of the parish of East Claydon. As such, we recognise our responsibility to minimise the Company's impact on our neighbours and the local environment.

It is the Company's objective to operate and continually improve our Management System in accordance with the requirements of standards ISO 9001 and ISO 14001 so that we can achieve our key quality principles and objectives which are:

"We recognise that our customers and distributors require products that meet their expectations, are received in good condition, received on time and are recognised as being of good quality. We aim to continually improve our existing products and reduce costs where possible, while ensuring the quality is maintained. In doing so we adhere to the Company's principle of providing outstanding customer service."

"We give a commitment to meet our stakeholders requirements by conducting business in a reputable manner, meeting our compliance obligations, maintaining a stable experienced workforce and through membership of related trade organisations; so as to ensure the continued development of the Company and provision of products to our customers."

In addition TCS Biosciences Ltd has implemented a Quality Management System that conforms to the requirements of ISO 13485 for its range *in vitro* diagnostic freeze-dried microorganisms.

The Company recognises its obligation to minimise the impact of its activities on the national and international environment with continual improvement including prevention of pollution and reduction in consumption of non-sustainable resources.

To this end the Company has formally identified its environmental aspects and impacts including a commitment:

- 1) To enhance environmental performance as well as continuing to meet all existing compliance obligations.
- 2) To identify, manage and wherever possible eliminate and reduce waste streams.
- 3) To manage and wherever possible reduce water usage and trade effluent to comply with discharge consents.
- 4) To identify, manage and wherever possible reduce energy consumption and consequential carbon dioxide emissions.
- 5) To continue to provide products and services which meet the requirements of our stakeholders and contribute to the current and future well-being of the public.
